“From the first visit, we collaborate with each patient to decide on the best treatment option. Often, this is not surgery.”

We've got your back.

The Spine Center of Saint Anne's Hospital provides advanced care for conditions of the neck, back and spine. We know that the diagnosis and coordination of care for spine conditions can be challenging for patients and their primary care providers. At the Spine Center, we streamline this process, with an experienced multidisciplinary team to diagnose spine disorders and develop individual treatment plans.

We provide the combined expertise of specialists in neurosurgery, physiatry (physical medicine), pain management, physical and occupational therapy, and a nurse navigator. Their coordinated approach begins when the referral is made. Our aim is to have the patient seen by the most appropriate specialist right from the start. From the first visit, we collaborate with each patient to decide on the best treatment option. Often, this is not surgery. Our expert team provides the latest in non-surgical interventions and surgery, including minimally invasive spine surgery. A nurse navigator works with providers and patients to coordinate treatment from referral through recovery.

Saint Anne's Hospital is the first in Massachusetts and Rhode Island to offer navigation-guided, robotic-assisted spine surgery. The precision of the Globus ExcelsiusGPS™ system provides a superior patient experience, including improved accuracy of spine implants, with less tissue damage and scarring and faster recovery.
