Advanced treatment for patients with non-healing wounds and ostomy care

If you're suffering from a non-healing wound, you're not alone. Every year, chronic wounds caused by diabetes, poor circulation or other conditions keep millions of Americans just like you from doing things they love.

Saint Anne's Hospital Wound Care Center can help and heal. We offer a comprehensive treatment program, including ostomy services, utilizing advanced techniques from a team of wound care specialists. Many patients find that wounds that have resisted healing after months and even years of traditional treatment can be treated. It's all we do. In fact, for most patients, the Wound Care Center leaves them completely healed in a relatively short period of time.

Our Team of Wound Healing Specialists

Our multidisciplinary team includes experienced multispecialty physicians, including podiatry, cardiology; vascular, general and plastic surgeons; and nurses specially trained in ostomy/wound care. They utilize the most advanced techniques in designing and delivering an individualized treatment plan in conjunction with each patient's referring physician.

The team approach to treatment

A variety of treatment options are available depending on type and severity of a wound. Treatment may include the following:

- Complete medical history and wound assessment
- Debridement and surgical intervention
- Negative pressure wound therapy

- Infectious disease management
- Nutritional management
- Diabetic education
- Wound protection and management
- Patient and caregiver education
- Therapies and home care referrals
- Vascular evaluation
- Doppler ultrasound
- Laboratory evaluation
- Nuclear medicine & radiology

If a consult with a surgeon is part of your treatment plan, our team of surgeons will see you in the Wound Care Center for your added convenience and coordination with your full wound healing team.
